

Features

- Volume Shadow Copy - back up files when they are open, e.g. Outlook.
- Bandwidth Throttling - allocates your bandwidth in the most efficient way.
- In-File Delta backup - only changes within files.
- Off-line backup mode and logout backup reminder.
- Real time backup server replication - allows server replication.
- No special setup required - quick and easy free trial subscriptions.
- Custom backup schedule - set backup schedule any time.
- Automatic data compression and encryption - worry free.
- Encrypted data only stored on server - useless to thieves.
- Increment backup - only new or updated files backed up.
- Support full backup (database backup and incremental backup (transaction log backup) for Microsoft SQL Server 7.0/2000, Microsoft Exchange Server 2000/2003, Lotus Domino/Notes 5.0 and Oracle 8 or above.
- Integrates with external "Open File Manager" - provides open file backup.
- Browser Interface - access to backup data anytime, anywhere on the internet.
- Comprehensive backup report - Documents all files in backup.
- Automatic backup report via email - quick and convenient reference.
- Data CRC validation - data integrity is maintained.
- Customizable data retention policy - access and recover deleted files.
- Backup Filter - Eg. Select all Word or Excel files to be backed up instantly.
- Custom OS commands - Run commands before/after a backup job.
- Windows, Mac OS X, Linux, NetWare, UNIX support.
- Live Update - deploy patches all clients quickly and easily.
- System activity report - shows all backup information, emailed to administrator.

Remote Offsite Backup Service Program

Secure, Simple and Affordable

Data loss does happen, and hard drives will crash, it is not a question of if, but when. Proactive is always better (and cheaper) than reactive. Many businesses that experience significant data loss never recover to prepare for the inevitable and minimize risk, data must be stored and secured in multiple locations. With the speed of the internet and encryption technology today, the solution is off-site backup.

VeriSafe will:

- Work with you to develop a backup plan for all your valuable information.
- Provide fully managed, secure and automated backup.
- Arrange a schedule to suit your requirements - daily, weekly, rotating, on-demand and long-term archive.
- Remote supervise your backup.
- Advise immediately of any failed backup activities or data discrepancies.
- Provide 24/7 secure online access to your backups for immediate, self-service restoration from our data centre.
- Provide additional backups on removable storage for audit or disaster recovery.

Hosted Offsite Backup Pricing

Price is based on average daily backup/upload volume, price may vary depend on volume as well as storage requirement. All pricing will be reviewed after three months; price will be generally lower at some instances (it may go up to 50% lower).

VeriSafe has a one-off setup fee of \$299. For this fee we will install and setup all software at your premises, extract your initial data and transfer it to your secure private space allocated on our VeriSafe servers. Ongoing monthly fees are based on your storage requirements as follows:

Plan 1	1GB Storage\$50/Month
Plan 2	2GB Storage\$65/Month
Plan 3	5GB Storage\$75/Month
Plan 4	10GB Storage\$95/Month
Plan 5	25GB Storage\$110/Month
Plan 6	50GB Storage\$165/Month
Plan 7	100GB Storage\$199/Month

**REMOTE OFFSITE
BACKUP SERVICE
PROGRAM**

Offsite Backup Features

- Guarantee**
We guarantee that your data will be safe and secure on our servers.
- Reliable**
The system performs FULL offsite backups of company data, automatically. This allows your staff to concentrate on their work and not have the burden of the security or integrity of company data.
- Safeguards**
The system keeps previous backups of your files and databases; rollback days, weeks or even months if you require.
- Open File Backup**
Mission critical databases need not be stopped to achieve a successful backup.
- Security**
Data on the offsite network is read-only, which protects against human error and sabotage.
- Detailed Reports**
Reports are delivered direct via email giving instant feedback on the backup process.
- Easy Restoration**
Restoring your remote data is quick and easy through a dedicated backup website.

Benefits

Selective or specific backup of:

- Microsoft Exchange Server 2000 / 2003
- Mail box level backup for Exchange Server
- Microsoft SQL Server 7.0 / 2000
- Lotus Domino/Notes 5.0 or above
- Oracle 8i or above
- MSOL 4.x or above
- Windows System State
- Common files (e.g. *.doc, *.xls)

How does it work?

The VeriSafe Online Backup Suite consists of 3 main modules:

The Client Software

VeriSafe Online Backup Manager (VeriSafe OBM) is

the client side program which uploads the selected files to the Backup server and looks after scheduled backup jobs.

The Server Software

VeriSafe Offsite Backup Server (VeriSafe OBS) is a web-based Management Console for system administrators

to manage the Backup Server, such as configuring system parameters, administering the backup accounts, viewing backup statistics and reports, etc.

The Replication Server

VeriSafe Replication Server (VeriSafe RPS) is another piece of server software running on a separate machine which provides close to real-time backup. Thus even if one of the VeriSafe OBS fails, the VeriSafe RPS still has a copy of the backup data.

OS Supported

Windows, Linux, Mac OS X, Novel Netware and Sun Solaris

Application Supported

Microsoft SQL Server, Microsoft Exchange Server, Oracle Database, MySQL, Database and Lotus Domino/Notes
